HIGH CAPACITY TRENCH DRAIN GIVES HIGH VOLUME FLOW

When you need to “move” water fast, especially around airports and roadways, look to Polycast 3000 series drain systems. Capture and route water at 3000 gallons per minute. It’s the fast way to remove unwanted water.

Strong vertical sidewalls reduce sidewall deflection during concrete pouring so flow is not reduced because of drain damage during installation, a common problem with lesser systems.

Light and easy to handle. Corrosion resistant. Quick installation with standard grating. Exceeds FAA pavement design loads and heavy-duty dynamic wheel loads for AASHTO-H029. Choose Polycast.
